                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human GlyT-2 transporter protein. The cDNA encoding GlyT-2 was generated by reverse transcription PCR (RT-PCR) from human spinal cord or cerebellum polyA mRNA. GlyT-2 is a glycine transporter found predominantly in the brain stem and the spinal cord. GlyT-2 regulates the levels of glycine, a major neurotransmitter, that preferentially influences the activity of N-methyl-D-aspartate (NMDA) receptors and strychnine-sensitive glycine receptors. The GlyT-2 protein can be used to treat or to diagnose a nervous system disorder or condition, e.g. pain, myoclonus, muscle spasm or hyperactivity, epilepsy or spasticity associated with stroke, head troums, neuronal cell death, multiple solerosis, spinal cord injury, associated with stroke and troums, neuronal cell death, multiple solerosis, spinal cord injury, associated with stroke and sections.

SUBCELLULAR LOCATION: Integral membrane protein.
MISCELLANEOUS: THIS PROTEIN IS THE TARGET OF PSYCHOMOTOR STIMULANTS SUCH AS AMPHETAMINES OR COCAINE.
SIMILARITY: BELONGS TO THE SODIUM: NEUROTRANSMITTER SYMPOR

Ophthalmol. Vis. Sci. 35:4039-4048(1994).

- FUNCTION: TERMINATES THE ACTION OF GABA BY ITS HIGH AFFIR SODIUM-DEPENDENT REUPTAKE INTO PRESYNAPTIC TERMINALS.

- SUBCELLULAR LOCATION: Integral membrane protein.

- TISSUE SPECIFICITY: BRAIN.

- MISCELLANEOUS: THIS PROTEIN IS THE TARGET OF PSYCHOMOTOR STIMULANTS SUCH AS AMPHETAMINES OR COCAINE.

- SIMILARITY: BELONGS TO THE SODIUM: NEUROTRANSMITTER SYMPOI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-FEB-1996 (Rel. 33, Created)

1 FUNCTION: TERMINATES THE ACTION OF SEROTONINE BY ITS HIGH
AFFIRITY SODIUM-DEPENDENT REUPTAKE INTO PRESYNAPTIC TERMINALS

1 SUBCELLULAR LOCATION: Integral membrane protein.

1 MISCELLANEOUS: THIS PROTEIN IS THE TARGET OF PSYCHOMOTOR
STIMULANTS SUCH AS AMPHETAMINES OR COCAINE.

1 SIMILARITY: BELONGS TO THE SODIUM:NEUROTRANSMITTER SYMPORTER
                                                                                                                                                                                                                                                                                                                                                                                                      Brain

TISSUE SPECIFICITY: EXPRESSED IN PLACENTA, BRAIN STEM, BR
MARROW, KIDNEY, LUNG, HEART, ADRENAL GLAND, LIVER, PARATI
GLAND, THYROID GLAND, SMALL INTESTINE AND PANCREAS.
MISCELLANEOUS: THIS PROTEIN IS THE TARGET OF PSYCHOMOTOR
STINULANTS SUCH AS AMPHETAMINES OR COCAINE.
SIMILARITY: BELONGS TO THE SODIUM: NEUROTRANSMITTER SYMPOI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FAMILY (SNF).

Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: TERMINATES THE ACTION OF SEROTONINE BY ITS HIGH
AFFINITY SODIUM-DEPENDENT RECUTAKE INTO PRESYNAPTIC TERMINALS.
-I- SUBCELLOLAR LOCATION: Integral membrane protein.
-I- SUBCELLANEOUS: THIS PROTEIN IS THE TARGET OF PSYCHOMOTOR
STIMULANTS SUCH AS AMPHETAMINES OR COCAINE.
-I- SIMILARITY: BELONGS TO THE SODIUM: NEUROTRANSMITTER SYMPORTER
